

IS218 Addendum

Oven Ventilation

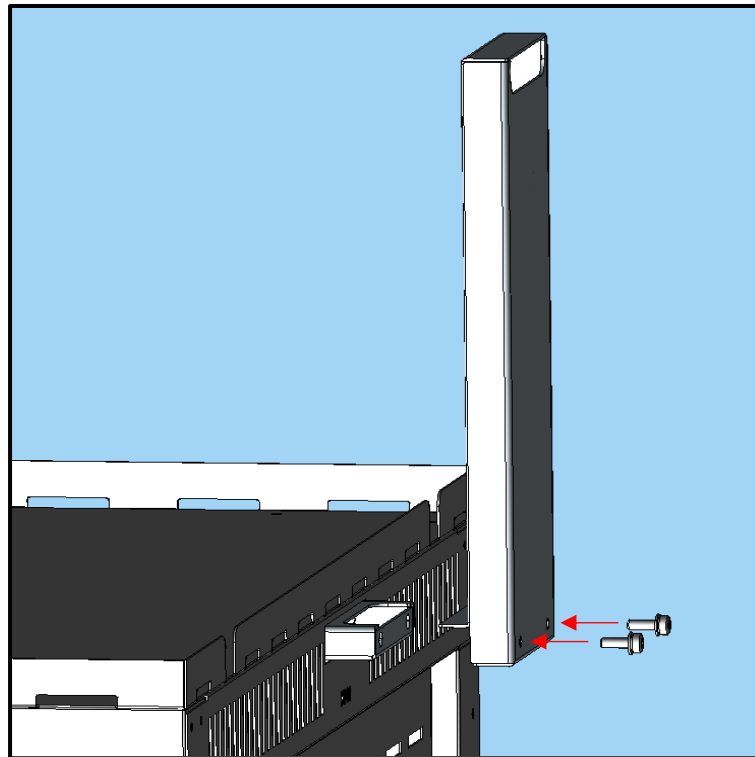

List of Products Affected:

- V6
- V6/D
- V6/F
- V6D/F

Customer Ventilation Installation

This document is an addendum for IS218, only affecting customers who will be fitting any Silverlink counter top unit onto the top of their V6 Oven.

To fit the ventilation outer, the holes in the bottom of the assembly must be lined up with the rivnuts in the ventilation inner and fixed together with the 2x FAS193 screws (M4X12 with a spring washer) provided in the user kit.

This ventilation type is only available on units from A005 onwards and is not backward compatible.
