

QUICK CLEANING GUIDE

- 1 Press the cleaning icon and wait for the unit to complete the cooldown cycle.

- 2 Wear PPE according to the chemical manufacturer's guidelines.

- 3 Remove the wire basket, wire shelf, and cavity liner and place them in the cleaning sink. **Do not spray cleaner directly inside the oven cavity.**

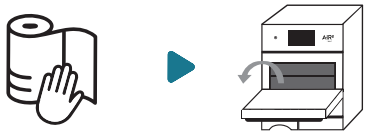

- 4 Spray cleaner over the cavity liner, basket and wire rack and allow chemical to soak for 10 minutes.

- 5 Use a sponge or soft brush to remove any stubborn dirt.

- 6 Rinse the removable parts with warm water and dry them.

- 7 Wipe the oven cavity with a cloth applying extra cleaner if needed. Then rinse out.

- 8 Dry with paper towel and leave door open.

- 9 Remove filter below door and rinse. Alternatively put through dishwasher. Then dry and fit back to the unit.
